# *USE OF WEB 2 TOOLS IN FOREIGN LANGUAGE LESSONS*

► The use of technology is important in many areas of education, as well as teaching foreign language has a special importance in education. With the increase in digitalization in education, the use of digital tools that will contribute to foreign language teaching has increased. Since the four basic language skills are at the forefront in a foreign language, it is expected that teachers use different materials and create the content of the materials according to the four basic language skills in order to develop these skills at the highest level.

► In this respect, digitalization also provides a positive contribution to teachers in terms of time and energy in the process of creating materials. From the student's point of view, it is thought that especially young people's interest in digital materials will affect learning more positively.

► Digitalization in education provides students with various learning opportunities with the meticulous inclusion of technology in educational environments and thus has a great importance in terms of increasing the internal motivation of students. For students who grow up in the digital age and spend a lot of time with digital applications, the integration of technology with education It will also have a positive effect on motivation.

► It can be said that motivation is a source of encouragement for learning, and redesigning educational tools with current technologies will increase the motivation of the student, as well as his success.

What is Web 2.0 Technology

► Web 2.0 concept was first used in 2004 by O'Reilly and MediaLive. It emerged while discussing the developments in the Web field and the future of the Web world at the Web conference organized by International and attended by the leading companies of the Web world such as Google, Yahoo, Msn, Amazon, Ebay.

► Kaplan and Haenlein (2010) , define the concept of Web 2.0; defined as a platform where content and applications are no longer created and published by the individual, but are continually modified by all users in a participatory and collaborative manner.

► Web 2.0 applications, which have the feature of providing access to constantly developing and changing information according to the needs of the users and facilitating the interaction between the users, are free, easy to use and diverse. The first examples that come to mind when Web 2.0 is mentioned are Facebook, Wikipedia, WhatsApp, Instagram and Twitter.

Contribution of Web 2.0 Technology to Education and Foreign Language Education

► Virtual learning environments with the transfer of information sharing to the digital environment enriched and increased the diversity of educational technology.

► Education is not just a process that takes place within four walls, it is actually a lifelong process. This understanding is an understanding of the teachers who enrich the information, not transfer the information, facilitate the learning process, and guide the learners in the process of accessing the information

Advantages of Web 2.0 tools in education

► With Web 2.0 tools you can use vocabulary trainers and thus build up and expand your vocabulary.

► Reduction of training costs

► Flexibility provided by preferred Web 2.0 tools

► Easier and faster when and where information is needed reach

► The learning and teaching activities of various Web 2.0 Technologies integration

► Possibility of saving information on computers and then easy access to information

► Control access to resources by authenticating users opportunity to

► Ability to share experiences and resources

► Platform independence (browser and internet connection computers are sufficient)

► Compatibility with the elements of the educational field and current contextual dynamics

- ► Requires minimum skill in using the Internet
- ► Long-term use
- ► Saving time and energy in accessing information
- ► Due to the existence of various Web 2.0 tools, the method and
- ► an increase in the number of tutorial applications
- ► Testing teaching practices using existing methods
- ► Easy digital content creation (especially media, podcasts and videocasts etc.)

Web 2.0 Tools

- Kahoot
- Learningapps
- digipuzzle
- Quizizz
- Wordwall
- Liveworksheets
- Quizlet

- I want to introduce you Quizlet
